

# The Whispering Forest

## Technical description

Each vegetal ball hanged to the net is built with an accelerometer which can detect every slightest moves.

Each vegetal ball hanged are built with 3 variable LED which intensity and color can vary along with the free moves of the ball.

The Whispering Forest is controlled with an Eobody2 sensor system.

A Max/MSP patch links the LED variations and the accelermeters datae to the sounds of each vegetal balls.

Sequences are recorded and several combinaisons are made to forestall the next coming visitor passage.

## Dimensions

Just as nature is filling empty space, The Whispering Forest can be sized to any dimension of empty space. This is a very flexible installation as its volume can be easily adapted to any space/room. It can be composed of 3/4 elements installed in a corner of a room or of an entire forest covering larger spaces. To create a forest like density, at least 12 spheres are required per each 3x3m.

The Forest is composed of spheres hanged to a net. Each sphere diameter is 30 cm. The height of the net can also be adapted to the exhibiting place.
